Ryan Luton

User Experience Design
User Interface Design
Front-End Development

As a designer and developer with seven plus years of experience, I look to further develop my skills as a creative. I seek to design intuitive user experiences, while finding elegant solutions to new challenges as they arise. With a strong technical knowledge of front-end practices and modern web standards, I can help keep agile story points low, by making sound design choices based not only on research, but also technical feasibility.

Professional Skills

- Firm believer in clean code, standards compliant design, cross browser development, and delightful user experience.

- Creative that pays attention to detail and pixel perfection, while also having an ability to consider development hurdles and limitations.

- Mobile first design thinking enables solutions to be solved before they arise. Keeping applications and solutions mobile optimized and responsive when needed.

- Self starter, that will go the extra mile when situations arise.

- Well organized and quick learning, able to find solutions to new and uncommon problems.

- Able to juggle multiple projects at a single time, while making strict deadlines and quality expectations.

- Lean practices and Agile aware, push to keep design ahead of development sprints. While technical enough to join a sprint if the deadline is in jeopardy.

- Well versed in multiple development technologies, including GIT and version control, Linux, Node, PHP, and more.
